Head of Research at Movation AS
Norway

“Our Journey of Today”

- Digitalisation of the Society
 - IoT, Big Data, Analytics
 - The Internet of Things (IoT) challenges
- Smart Grid, Smart Homes, Smart Infrastructures
 - Scalability in IoT
 - Measurable Security & Privacy - IoTSec.no
 - Logic, Cloud,
- “*Some meat for discussion*”

Privacy labelling

Background: Digitalisation of Industry

- EU has introduced¹ **Industrie4.0**
 - digital innovation hubs,
 - leadership in digital platforms,
 - closing the digital divide gap
 - providing framework conditions
- Norwegian Government has established² “Klyngene som omstillingsmotorer” (Sep2015)
 - NCE Smart Energy Markets on “**Digitalisation of Industry**”
 - NCE Systems Engineering på Kongsberg og NCE Raufoss on Productivity and Innovation

Future Smart Grid operation, § 4-2 functional requirements

“Forskrift om måling, avregning, fakturering av netttjenester og elektrisk energi, nettselskapets nøytralitet mv.”

1. Store measured values, registration frequency max 60 min, can configure to min 15 min.
2. **Standardised interface (API) for communication with external equipment using open standards**
3. Can connect to and communicate with other type of measurement units
4. Ensures that stored data are not lost in case of power failure
5. Can **stop and reduce power consumption** in every measurement point (exception transformer)
6. Can send and receive information on electricity prices and tariffs. Can transmit steering information and ground faults
7. Can provide security against miss-use of data and non-wished access to control-functions
8. Register flow of active and re-active power flow in both directions

§ 4-2. Funksjonskrav

AMS skal:

- a) lagre måleverdier med en registreringsfrekvens på maksimalt 60 minutter, og kunne stilles om til en registreringsfrekvens på minimum 15 minutter,
- b) ha et standardisert grensesnitt som legger til rette for kommunikasjon med eksternt utstyr basert på åpne standarder,
- c) kunne tilknyttes og kommunisere med andre typer målere,
- d) sikre at lagrede data ikke går tapt ved spenningsavbrudd,
- e) kunne bryte og begrense effektuttaket i det enkelte målepunkt, unntatt trafomålte anlegg,
- f) kunne sende og motta informasjon om kraftpriser og tariffer samt kunne overføre styrings- og jordfeilsignal,
- g) gi sikkerhet mot misbruk av data og uønsket tilgang til styrefunksjoner og
- h) registrere flyt av aktiv og reaktiv effekt i begge retninger.

Norges vassdrags- og energidirektorat kan etter søknad i særlige tilfeller gi dispensasjon fra enkelte funksjonskrav.

0 Tilføyd ved forskrift 16 jan 2012 nr. 75 (i kraft 20 jan 2012).

Smart Home vs Smart (Distribution) Grid focus

[source: Davide Roverso, eSmartSystems]

Ecosystem - Application Scenarios for Smart Meters

- Monitoring the grid to achieve a **grid stability** of at least 99,96%,
- **Alarm functionality**, addressing
 - ➔ failure of components in the grid,
 - ➔ alarms related to the Smart Home, e.g. burglary, fire, or water leakage,
- **Intrusion detection**, monitoring both hacking attempts to the home as well as the control center and any entity in between,
- **Billing functionality**, providing at least the total consumption every hour, or even providing information such as max usage,
- **Remote home control**, interacting with e.g. the heating system
- **Fault tolerance and failure recovery**, providing a quick recovery from a failure.
- Future services
 - ➔ Monitoring of activity at home, e.g. “**virtual fall sensor**”

Security and Privacy challenges

- Smart Meter
 - read and control
 - logic?
- Smart Home
 - intelligent devices
 - on-demand regulation
- Challenges
 - Logic: Centralised ↔ Fog
 - Smart Meter: Information ↔ Control
 - Smart Grid Information ↔ Internet Info

National initiative for a more secure future in IoT

IoTSec.no - Security for IoT for Smart Grids

Home Research Areas Security Centre Publications About us

The IoTSec - Security in IoT for Smart Grids initiative was established in 2015 to promote the development of a safe and secure Internet-of-Things (IoT)-enabled smart power grid infrastructure. The Research Project received funding from the Research Council of Norway (RCN) to contribute to a safe information society.

IoTSec addresses the basic needs for a reliable and efficient, uninterrupted power network with dynamic configuration and security properties. It addresses in addition the needs of businesses and end users of additional IoT services by exploring use cases for value-added services with the intent to design the building blocks for future services that consider the necessary security and privacy preconditions of successfully deployed large-scale services. IoTSec will apply the research in the envisaged Security Centre for Smart Grids, co-located with the Norwegian Centre of Excellence (NCE Smart).

Appfail Report - Threats to Consumers in Mobile Apps

The Norwegian Consumer Council analysed the terms of 20 mobile apps. The purpose is to uncover potential threats to consumer protection hidden in the end-user terms and privacy policies of apps.

IoT challenges - “programmed to kill”

Why Self-Driving Cars Must Be Programmed to Kill

Self-driving cars are already cruising the streets. But before they can become widespread, carmakers must solve an impossible ethical dilemma of algorithmic morality.

IoT security forcing business model changes, panel says

Share this article:

To secure the **Internet of Things** and to build trust with customers, the way that vendors approach manufacturing, distributing and supporting devices and solutions must change, a panel of security pros said Monday at the National Cyber Security Alliance's (NCSA's) Cybersecurity Summit held at Nasdaq.

"Business models will have to change. We used to build them [products], ship them and forget about them until we had to service them," said John Ellis, founder and managing director of Ellis & Associates. "We've moved to a new world where we have to ship and remember."

Volvo will "accept full liability" for collisions involving its autonomous vehicles, the company has confirmed.

The “sharing economy” for energy companies?

Ved å bygge internett for alle, og ved å skape relevante og uunnværlige digitale tjenester, kan vi bidra til en bedre verden, skriver Sigve Brekke.

Conclusions

- Internet of Things (IoT) is a game changer
 - Everything is wireless: Smart Infrastructures
 - Autonomous systems, Critical Infrastructure
- Collaborative approach for a (more) secure society
 - “the cloud is not the answer” - distributed security
 - partnership for security: threats, measures, counter activities
- Measurable Security and Privacy for IoT
 - IoTSec.no - Security for Smart Grid
 - Industrial impact: Security Centre for Smart Grid
 - Privacy labelling for apps and devices
